Potential competing interests: No potential competing interests to declare.

The manuscript titled "Lymphoma: Potential viral antagonism between HTLV-1 and JCV associated with increased survival time" delves into the important realm of viral interactions, particularly emphasizing the significant interplay of infectious viruses, especially retroviruses, within neoplasms. However, the introduction primarily discusses the relationship between HTLV-1 and HIV (Human Immunodeficiency Virus), while it should center on HTLV-1 and JCV.

- Please specify whether you are referring to HIV-1 or HIV-2.
- The discussion section lacks proper referencing. It is imperative for the discussion to comprehensively describe and analyse previous studies. The author should leverage this section to expound upon findings based on existing literature and/or propose potential explanations. However, as your article serves as a review, both the discussion and conclusion sections should be omitted.
- First paragraph in Discussion: reword as "cancer-causing virus"
