Review of: "The Influence of Glycemic Status and Sociodemographic Factors on Patients' Dental Caries Risk and Experience in Lagos, Nigeria"

Abiola O. Oduwale¹

1. University of Lagos, Nigeria

While the authors have tried addressing my concerns regarding the status of people living with diabetes with their inclusive statement in the summary, it would have made the paper more rounded if one or two of the comments were addressed.

For future papers on this important topic, the concern about the effect of duration (how long the patient has been diabetic as of the time of review), glycemic control (using HBA1C, Mean blood glucose for a three-month period), and patient diabetes knowledge must be evaluated, as all three can predict the risk of complications, of which dental caries is one.
