

Review of: "Does Sugar Control Arrest Complications in Type 2 Diabetes? Examining the Rigour in Statistical Methods and Causal Inference in Clinical Trials"

Antonio J Garcia Ruiz¹

¹ Universidad de Málaga

Potential competing interests: No potential competing interests to declare.

A necessary and exceptional article showing certain uncontrolled biases in studies that have been referenced in type 2 diabetes.

The authors clarify which have been the most important biases (analysis defects, purchasers, etc.) and give hints on how to solve them.

They point out what these biases were and state the lack of statistical rigour in some cases.
