Potential competing interests: The author(s) declared that no potential competing interests exist.

1. It is a good research on interaction about Salmonella and its host, the relation of secreted proteins quantity by T3SS and Salmonella load in macrophages should be known. the secreted proteins quantity is not known by Salmonella load or Salmonella ability.
2. the format should according to the journal which this paper was submitted
3. why are the time-dependent bacterial proteins different?
4. strain-dependent response, this strain means mutant, but we easily misunderstand it to as different serovar Salmonella
