Potential competing interests: No potential competing interests to declare.

The article reports data about the effects of cadmium treatment in the spotted snakehead, *Channa punctata* (not *punctatus*). The experimental design and methods are presented correctly, and the conclusions are in line with the results. The discussion is appropriate, and the literature is exhaustive. The main problem is in the language, which needs a thorough revision. My general comment is "accept with minor revision." Further corrections are reported in the attached file.
