

# Review of: "On Probabilities in Quantum Mechanics"

Larry Zamick<sup>1</sup>

<sup>1</sup> Rutgers University

**Potential competing interests:** No potential competing interests to declare.

I feel this article should be rewritten to be more self-contained, e.g., there is mention of the Born formula but no statement of what it is. So there should be several subheadings

## 1. The Born Formula

Here is the Born formula, etc.

## 2. My Definition of Probability

Here is my definition of probability. (Not sufficient to say "look at ref 12 to see what my definition of probability is")

In other words, write the paper as if this is the first time you have written on this subject.

If this is done, I will be favorably disposed to this paper.
