

# Review of: "An automatic screening method for strabismus detection based on image processing"

Jorge Meireles-Teixeira

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

The article I reviewed uses a very clever way to assess the alignment of the eyes, by estimating and comparing pupil centers. With this method the lighting of the room can be, in some extent, neglected and this makes it very useful for the intended purpose: be a cheap and user-friendly device for strabismus screening.
