Absence of Biallelic TCRgamma Deletion

National Cancer Institute

Source

National Cancer Institute. *Absence of Biallelic TCRgamma Deletion*. NCI Thesaurus. Code C113506.

The absence of rearrangement of at least one allele of the T-cell receptor gamma gene locus. This lack of rearrangement is characteristic of early thymocyte precursors and a lack of V(D)J recombination. This genetic profile is a predictor of induction therapy failure in children with T-cell acute lymphoblastic leukemia.
