Potential competing interests: I am a long term consultant to various tobacco companies and organizations, thought not to JUUL as far as I can remember.

Having had a close look at the paper by Selya et al, I find it well-written and clear, and I have no constructive comments at all. Apart from two occasions (in the second sentence in the paragraph "Measures" and in the first line of the paragraph above Table 3) where a word in italics collides with the previous word, the paper is absolutely fine. As a long term peer reviewer this is a comment I can very rarely make!
