Dear Author,

The research article titled "A Fintech Clustering Framework: Technology, Model and Stakeholder Perspectives" addresses an important perspective regarding this rapidly growing sector.

1. The paper incorporates 100 plus studies, showcasing a holistic approach to the study.

2. Choosing fintech firms enhances the relevance of the clustering framework in terms of practical applicability.

3. Clarity is required in defining the research problem, as confusion in multiple definitions may hinder development.

4. While the paper has stated a narrative review of 100 plus studies, it is not clearly stated how these were selected.

5. "This problem will hinder further development" – in a sentence, if it is specified which aspect of development (like innovation), it will give more clarity.

6. Overall, the paper provides valuable insights into the classification of Fintech and its practical relevance in Indian firms.
