

# Review of: "Captive breeding and larval rearing of the endemic ornamental fish Moustached Danio, *Danio dangila* (Hamilton, 1822) – First report"

Temesgen Geletu

Potential competing interests: No potential competing interests to declare.

Generally, the article has importance in advancement of endemic/endangered fish species conservation.

Specific comments.

Introduction part:

Second sentence: Northeast India is enough, no need to mention geographical coordinates.

Also be consistent with either Northeast or North-East

I suggest changing "trading demand" with market demand (end of paragraph 1)

At the end of paragraph 2 citation is required.

Please spell (do not abbreviate) genus name at first mention. (e.g. *P. shalynius* in paragraph 3).

Mention extended name for WOVA-FH at first and then can use short version.

*Is danio dangila ornamental fish or has a potential to be ornamental fish (need to be clarified).*

Materials and methods part:

Please include size (average weight etc) and sex of the fish collected

Mention extended versions of abbreviations such as FRP and RAS at first mention.

Mention the average weigh of the larva

Figure 1: requires x and y axis labels
