The manuscript presents valuable research on the reproductive biology of the commercial species *Pagrus caeruleostictus* from the coast of Ghana. The research is well structured, but some improvements are needed. The aim of the study should be stated in the Introduction section. It is necessary to add a table showing how many fish (males and females) have been caught per month. There are some technical mistakes to be corrected, as well as findings that need more detailed explanation. Detailed remarks can be found in the attached file.
