

Review of: "Exploring machine learning techniques to develop predictive models to address unemployment rates in the implementation of Industry 4.0"

M. S. Balamurugan¹

¹ Vellore Institute of Technology

Potential competing interests: No potential competing interests to declare.

1. The abstract mentions the use of "regression analysis" and "neural networks" but doesn't provide enough detail about the specific machine learning techniques used.
2. Please mention the accuracy achieved, any notable insights, or comparisons to previous models or methods.
3. Need language clarity in the abstract. E.g.,: Instead of execution of I4.0," consider using "implementation of Industry 4.0" for clarity.
4. The introduction provides a comprehensive overview of the research topic.
5. However there is a significant amount of repetition in the introduction and clarity in sentence needed.
6. In Predictive model topic it was mentioned that predictive model was developed, but without highlighting what predictive model approach of machine learning or regression or neural network is use?
7. Literature review is written precisely.
