Potential competing interests: No potential competing interests to declare.

This study proposes a method for home security system using IOT technic. The flow of the paper is not acceptable, however it is good if it can go through an editing to make it more focus on analysis. The system developed in this paper is not really new or unique. Some sections of the paper also lack depth and should be expanded. . The "Literature Review" section is more of a description of an equipment/ components.

In my view, the paper can be considered for publication if the authors will consider several amendments as follows:

- Setting justify all paragraph
- Abstract: The abstract of the paper is not following the normal flow of paper. The abstract should include broader introduction, background of problem with statement, methodology to be followed, results and what is overall result of this research study. Avoid using 'author'. Too simple, which not discussed what the main contribution of paper, including technique applied and the outcome of work.
- No citation? Citation not doing in good procedure
- Tiada table of content title
- Figure 7. Need to label all the item
- Figure 8, change to english language
- Figure 9, 10 blur. Please improve the figure
- There are 2 references part?
