The study represents a thorough and accurate summary of the epidemiology of mycetoma cases in animals over a wide time interval up to the present day.

The paper is clearly written and well structured, and the supporting bibliography is extensive and well documented. The tables are explicative and adequate to summarize and clarify the information in the text, as are the figures.

In conclusion, the work represents an excellent in-depth study of the topic discussed and appears very useful as a summary of information related to the pathology in question.
