Potential competing interests: No potential competing interests to declare.

The article "System and Method for One or More Extruders Using Robotic Arms to Print a 3D Model" attempted to develop a new kind of 3D printer to perform in a shorter amount of time. The reviewed manuscript is more of a technical report rather than a research paper. It is a simple CAD design without any theoretical or experimental validation to prove the feasibility of the proposed idea.

At this stage, the proposed idea is more like a CAD file that needs to be well-developed and supported by theoretical or experimental analysis.
