The paper is a literature review of the « Scientific Literature on Experimental Toxicity Studies of COVID-19 Vaccines, with Special Attention to Publications in Specific Toxicology Journals ».

The authors pointed out the few number of nonclinical/experimental studies on the adverse/toxic effects of the COVID-19 vaccines published in scientific journals, and most of them showed a good safety profile.

The debate is interesting and very useful for public health and decision makers as lessons learned, mainly for the next pandemic.

The title is concise, clear, and reflects the content of the paper.

The abstract summarizes the scope, the objective, and the results.

The results are detailed and clearly presented, the references are recent, relevant, and sufficient to support the conclusions.
