

Review of: "Antimicrobial Ayurveda Crops as Superfoods for Export, Conservation & Farmers' Benefit"

Rosemary Agbeko¹

¹ University of Cape Coast

Potential competing interests: No potential competing interests to declare.

Abstract: The abstract should capture the four marginal crops considered in the study.

Methodology: The methodology is not detailed enough. A full description of how information was obtained on the crops should be provided. Databases or other relevant sources where information was obtained must be indicated and properly cited where necessary.

Results: Table 1 should include the type of solvent(s) used for the extraction, and the total phenolic content should be properly quoted for the references cited.

Table 2: The description of the results for Table 2 should focus on the economic aspect or income potential rather than elaborating on the antioxidant values of the crops.

Discussion: The results obtained should be properly discussed. For instance, the antimicrobial properties of the crops should be linked to the activity of some of the active ingredients cited in the results and compared with other studies from the literature.
