

Review of: "Sustainable Agriculture and Climate Resilience in Türkiye: A Comprehensive Analysis"

Francesco Galioto¹

¹ Council for Agricultural Research and Agricultural Economy Analysis

Potential competing interests: No potential competing interests to declare.

The paper is not well structured. Objectives are not clear enough and the process followed to achieve the objectives is very vague. However, the paper is potentially of great interest, but it needs major revisions to allow for publishing. Below, I provided some additional comments.

Abstract

The abstract is too long, and it seems more an introduction than a summary of the paper. Please, revise it, accordingly. You should put more emphasis on the interplay between environmental policies and development plans. You state you use economic modelling, but I do not see any modelling in the paper.

Agricultural Targets of Türkiye's National Climate Change Adaptation Strategy and Action Plan 2011-2023

It is hard to follow the entire paragraph. Sometimes there are repetitions and the information provided are often redundant. It might be appropriate to make a synthesis of the strategy, possibly, reducing the use of bullet points. Then, it might be worth to have an additional explanation of the instruments put in place by the Turkish government to pursue the different objectives.

Environmental Outlook for Turkish Agriculture with Agricultural Statistics

Also here, so information are already provided in the former paragraph. Too many bullet points.

Conclusions

There are no conclusions. You should provide conclusions explaining the strengths and weaknesses of the strategy, what are the difficulties faced by the agricultural sector and how the strategy is actually supporting farmers
