

Review of: "Maintaining cyberhygiene in the Internet of Things (IoT): An expert consensus study of requisite user behaviours"

Dina ElMenshawy

Potential competing interests: No potential competing interests to declare.

The paper talks about an important topic and it presented a good study, however, I suggest the following updates so that the manuscript can be better presented.

- You need to clearly mention the contribution of the manuscript in the introduction section.
- The organization of the paper is not easy to follow. The paper can be re-organized in smaller sections so that it can be easily understood.
- The results of the study and all other parts which include numeric vales can be better presented. For example, they can be put in a tabular format to be easy read and interpreted.
- The discussion section including the numeric values can be better re-phrased and organized to analyze the results of the study.
- Explain in more details the concept of "cyberhygiene" when first mentioned in the text since it is the focus of the study and also the word "cyberhygiene" is mentioned in the title.
- Show in detail the various techniques of maintaining the cyberhygiene.
