**Potential competing interests:** No potential competing interests to declare.

This manuscript is dedicated to the analysis of the dosimetric parameters of a linear accelerator, using a device that, in reality, is quite old. Currently, there are devices on the market for this purpose with much greater versatility and equipped with a significantly larger set of detectors, and thus more suitable for satisfactorily measuring all relevant dosimetric parameters. It does not seem to me that this manuscript has sufficient novelty to deserve consideration for publication.
