# Annexin Family Protein

National Cancer Institute

## Source

National Cancer Institute. *Annexin Family Protein*. NCI Thesaurus. Code C128917.

A family of proteins that are capable of binding negatively charged phospholipids in a calcium-dependent manner and contain four annexin repeats. This family has been linked with a wide variety of biological processes, including inhibition of phospholipase activity, exocytosis, endocytosis, coagulation, fibrinolysis, the regulation of inflammation and membrane organization.
