The article is well written, with the abstract well explained. 2022 can be removed from the title. The study duration could have been extended to increase the sample size, considering the delivery rate of the study institute.

The method of data collection is not mentioned in brief, as it is mentioned that many women were illiterate. Kindly mention the mode of data collection—questionnaire if provided in detail, would be useful.

Details regarding the surgical outcomes for any patient can be mentioned.

The article can be considered for publication after consideration of the above details.
