MRTFB wt Allele

National Cancer Institute

Source

National Cancer Institute. *MRTFB wt Allele*. NCI Thesaurus. Code C142160.

Human MRTFB wild-type allele is located in the vicinity of 16p13.12 and is approximately 195 kb in length. This allele, which encodes MKL/myocardin-like protein 2, is involved in skeletal myogenesis. A translocation t(11;16)(q13;p13) that fuses this gene to the C11orf95 gene is associated with chondroid lipoma.
