Potential competing interests: No potential competing interests to declare.

A commentary must include references. Although a few details of the official tests for children cognitive evaluation are given, the author needs to cite properly the adopted evaluation of children's behavior. Moreover, in view of the tremendous increase of behavioural and cognitive problems in babies and children, the commentary should summarise some ideas for the best practice and give appropriate references (see for example the discussion of different methodologies given in: J Pers Med. 2021 Jan 25;11(2):70)
