Review of: "Analytical Methods for Tracking Body Movements on the Lunar Surface in Apollo XVI Footage"

Clara Rojas¹

1. Physics Department, Yachay Tech University, Urcuqui, Ecuador

The paper is very interesting, it has very nice figures, and it is written very well. However, please review the format of all equations (for example, the equation of the focal length and in Section A.2.1.2, for example. In general, all equations in the article).

Also, put a punctuation mark at the end of each equation.

Best regards,

Clara
