# NAD-Binding Domain

National Cancer Institute

## Source

National Cancer Institute. *NAD-Binding Domain*. NCI Thesaurus. Code C14071.

The Gly-rich NAD-Binding Domain (often N-terminal) is often found in metabolic enzymes involved in glycolysis, glyconeogenesis, and the citric acid cycle, such as GAPDH (glyceraldehyde-3-phosphate oxidation and phosphorylation), lactate dehydrogenases (lactate to pyruvate conversion), and malate dehydrogenases (malate to oxaloacetate interconversion). (NCI)
