FURIN wt Allele

National Cancer Institute

Source

National Cancer Institute. *FURIN wt Allele*. NCI Thesaurus. Code C49715.

Human FURIN wild-type allele is located in the vicinity of 15q26.1 and is approximately 15 kb in length. This allele, which encodes furin protein, plays a role in the cleavage of proteins containing paired basic amino-acid residues to release mature proteins from their precursor proteins.
