Potential competing interests: No potential competing interests to declare.

The introduction provides a good overview of the topic. However, it would be beneficial to include more recent research or findings in this area to demonstrate the current state of knowledge.

Provide more details about the experimental methods and techniques used in the study. This will help other researchers replicate the experiments and assess the validity of the results.

Consider adding a flowchart or diagram to illustrate the experimental workflow.

The discussion should not only summarize the results but also provide a comprehensive analysis and interpretation of the data. Discuss how the results relate to the research question and existing literature.

Consider addressing potential limitations of the study and suggesting avenues for future research.
