Dear

Gabri

Peer Review Team, Qeios

Thanks for allowing me to review the manuscript with the title **In-Vitro Antibacterial Activity of Some Ganoderma Species: A Review**".

In this study, the author focuses on a **Review of In-Vitro Antibacterial Activity of Some Ganoderma Species**.

In my opinion, the manuscript can be accepted only after minor revision considering the comments below:

1. Why does the author introduce the review with Diabetic Foot Ulcer? Mention the importance of Ganoderma species in the treatment of Diabetic Foot Ulcer.
2. It lacks an abstract summarizing the main results and showing the general conclusions.
3. Why have more recent results on the antibacterial activity of some Ganoderma species not been included in this review?
4. The focus is on antibacterial activity, so the author should present the main results in tables to make the paper more descriptive and clear.
5. Grammar and spelling mistakes remain and may need to be reviewed in detail.

Overall, I think this paper could potentially be suitable for publication in Qeios after a minor revision, and I hope my comments will help the author to improve their manuscript and get it published.
