

Review of: "Effective Communication in Virtual Project Teams at Children Mission Africa: A Short Communication"

Nureyzwan Sabani

Potential competing interests: No potential competing interests to declare.

After reviewing the results of the above research, there are some weaknesses or shortcomings that can be identified. First, the research method used relies only on a qualitative approach through case studies, without taking into account quantitative data that can provide a more comprehensive understanding of the phenomenon being studied. Second, the sample used may not be statistically representative, as it only involves members of the virtual project team at Children Mission Africa. This may limit the generalization of research findings. Thirdly, despite the discussion of effective communication strategies and technologies, there is no in-depth analysis of the effectiveness of each identified strategy or communication tool, and how they can be implemented specifically to address the identified challenges.

To correct these weaknesses, there are some suggestions that can be proposed. First, research can be supplemented with quantitative research methods, such as surveys or secondary data analysis, to provide a more thorough and in-depth understanding of the phenomena being studied. Second, research may extend its sample to cover more organizations or virtual project teams, so that the results are more statistically representative. Third, research can carry out further analysis of the effectiveness of strategies and communication tools identified, as well as provide practical guidance on how to implement them in different contexts. Thus, research will make a greater contribution to practitioners and researchers interested in the field of virtual project team communication.
