# Ganglioglioma

National Cancer Institute

## Source

National Cancer Institute. *Ganglioglioma*. NCI Thesaurus. Code C3788.

A well differentiated, slow growing neuroepithelial neoplasm composed of neoplastic, mature ganglion cells and neoplastic glial cells. Some gangliogliomas show anaplastic features in their glial component and are considered to be WHO grade III. Rare cases of newly diagnosed gangliogliomas with grade IV (glioblastoma) changes in the glial component have also been reported. (Adapted from WHO)
