Review of: "Fast Addition for Multiple Inputs with Applications for a Simple and Linear Fast Adder/Multiplier And Data Structures"

Renuka G[1]

1 Jawaharlal Nehru Technological University

1. Literature survey is required and limitations in existing work should be discussed and how your work can overcome that can be discussed.

2 .In references only one paper is there from 2020, so latest references should be included.

3. No results in the paper, In conclusion author had mentioned results in future work can include a thorough description of group etc, so this is a study paper and author can change the title according to that.

4. Comparison table between existing and proposed work can be provided.
