Thank you for considering my suggestions! I appreciate your effort.

However, after reading your Statistical Analysis section, I'm concerned. It seems insufficient to use only excel to calculate what you presented. I saw the other studies you already published, and looking at the Statistical Analysis section, I found SPSS, Python, and even R analysis. Are you certain that you did not use any of these methods? And if not, how did you calculate the significance of your values?

If you cannot explain this, I'm afraid I will withdraw from this paper revision.
