Review of: "Continuous Video Process: Modeling Videos as Continuous Multi-Dimensional Processes for Video Prediction"

Elakkiya R¹

1. Birla Institute of Technology and Science Pilani, Pilāni, India

I have noticed that the same content appears in the CVPR 2024 proceedings under the title "[Video Prediction by Modelling Videos as Continuous Multi-Dimensional Processes](#)." If this is indeed the same work, it constitutes duplicate publication unless explicitly declared and permitted. Authors must clearly state the relationship between this submission and the CVPR publication to ensure transparency and adherence to academic standards. Without such clarification, this manuscript cannot be considered original.

Publishing the same work in multiple outlets without proper disclosure conflicts with academic publishing ethics. Authors are encouraged to address this issue by clarifying the relationship between the Qeios submission and the CVPR paper.

Without clear justification of how this submission differs from the already published CVPR paper, the manuscript cannot be considered for publication on Qeios. Authors must disclose the overlap and provide a detailed explanation of the novelty or expanded content specific to this submission. Otherwise, this raises concerns about duplicate publication and academic integrity.
