Potential competing interests: No potential competing interests to declare.

In the article, the authors emphasized the importance of information and communication technologies, the implementation of which supports the improvement of transport processes, which translates into the efficiency of the supply chain in terms of delivering deliveries in the Just-in-Time system. However, the authors did not use any mathematical methods to determine effectiveness. The article would gain a scientific aspect if research was carried out in relation to the assessment and criteria of suppliers. The presented conclusions are superficial due to the lack of a scientific aspect.
