**Potential competing interests:** The author(s) declared that no potential competing interests exist.

1. A good descriptive study.
2. Study does not have well defined objectives.Hence hypothesis testing was also not seen in the study.
3. Author in his discussion could have channelized the focus where statistics reveal the timely, dedicated and continued works of few doctors wherein the interruption of work was not seen and continued the services to the patient during the pandemic too. Such discussion will pave way for hope and inspiration to other medical fraternity.
