V-Type Immunoglobulin Domain-Containing Suppressor of T-Cell Activation

National Cancer Institute

Source

National Cancer Institute. *V-Type Immunoglobulin Domain-Containing Suppressor of T-Cell Activation*. NCI Thesaurus. Code C120581.

V-type immunoglobulin domain-containing suppressor of T-cell activation (311 aa, ~34 kDa) is encoded by the human VSIR gene. This protein plays a role in the negative regulation of T-cell function.
