# DRG2 wt Allele

National Cancer Institute

## Source

National Cancer Institute. *DRG2 wt Allele*. NCI Thesaurus. Code C125552.

Human DRG2 wild-type allele is located in the vicinity of 17p11.2 and is approximately 20 kb in length. This allele, which encodes developmentally-regulated GTP-binding protein 2, plays a role in the regulation of cell growth and differentiation. Deletion of the region that the gene is located in is associated with Smith-Magenis syndrome.
