Dear Author,

First of all, I congratulate you on the initiative to explore the One Health perspective in solving problems related to diseases carried by arthropod vectors. In fact, there is no other way to mitigate damage to the health of human and animal groups other than through joint and strategic action by government actors and society in favor of One Health.

I believe that you have correctly highlighted the problems and possible solutions for implementing a joint risk mitigation policy for human and animal public health. However, I will indicate as essential literature to compose the references of your manuscript, the PAHO guide/WHO regarding strategies for surveillance and control of certain diseases transmitted by arthropod vectors (or not) of importance for global public health: GLOBAL VECTOR CONTROL RESPONSE 2017 – 2030 (<https://iris.who.int/bitstream/handle/10665/259205/9789241512978-eng.pdf>). Furthermore, I wish you all the luck in producing scientific knowledge and disseminating One Health among your peers.
