Questions to the author about the article.

1. The article requires scientific corrections to ensure its accuracy.
2. The information provided about the research objects, namely PVC and ethylene-propylene elastomer polymers, is incomplete, lacking information about their physical and chemical properties.
3. While the article presents the results of various research methods such as structural IR, thermal, rheological, and physical mechanical analyses of PVC/ethylene-propylene elastomer polymer mixtures, there is no information about the equipment models used for these research methods.
4. Images 1, 2, 3, and 4 require processing.
5. The article lacks information about the standards of the research methods employed.
6. It is advisable to expand the list of references used in the article. (For example: doi.org/10.1002/app.21765, doi.org/10.1002/vnl.21920, doi.org/10.1002/vnl.21687)
