Non-Destructive Post-Transplant Lymphoproliferative Disorder

National Cancer Institute

Source

National Cancer Institute. *Non-Destructive Post-Transplant Lymphoproliferative Disorder*. NCI Thesaurus. Code C7234.

A lymphoproliferative disorder arising as a result of post-transplant immunosuppression therapy. It is characterized by the lack of tissue destruction and the architectural preservation of the involved tissues. It includes two morphologic variants: plasmacytic hyperplasia and infectious mononucleosis-like lymphoproliferative disorders.
