

Review of: "Hepatoprotective Effect of the Ursolic Acid-Oleanolic Acid Mixture Administered Intragastrically in Mice with Liver Damage Induced by Anti-TB Drugs"

Mohsen Korani

Potential competing interests: No potential competing interests to declare.

This article is well-designed, executed, and written. But I have some suggestions and questions for the authors.

1-Please specify whether the Anti-TB drugs are administered as co-treatment, pre-treatment, or post-treatment with UA/OA?

2-Do you have a reference for using doses of 10 and 20 mg/kg of UA/OA?

3- Please add the data of oxidative stress markers in the results section.

4-Please add the data of NMR in the results section.

5-Please add a scale bar in the histological figures.

6- Please add the histological analysis of the spleen and kidney.

7- Please use TG instead of TRIG.

8- Please add the p-value in Table 1.

9- Please write the number of mice in each group.
