Review of: "Prevalence of Buruli Ulcer Among Residents in Jasikan Municipality: A Cross-Sectional Study"

Nordine Nouayti[1]

1 Université Abdelmalek Essadi

In my opinion an acceptable job with minor modifications,

And here are some remarks:

Justify the choice of the two software programs: EpiData Manager version 4.0.2.101 and Stata version 14.1

And the references of the two software

Study area is better to add a map

Unify references: by Kelsey et al. (1996) and (Yeboah-Manu et al., 2018).

Sampling methods:

In this part there are no statistics in health administrations in the region or other sources…???

The statistical study why you didn't use diagrams or histograms just tables

 And for the method normally the subject of descriptive statistics using mean, minimum, maximum and standard deviation values and multivariate statistics based on Principal Component Analysis (PCA), Varimax rotation and ascending hierarchical classification (CAH) and others but in your article I did not mention that….
