Potential competing interests: No potential competing interests to declare.

The study is interesting as it analyses equities in terms of sustainability criteria; however, the following is recommended:

1. The summary does not present the results and the main conclusions.
2. It is necessary to include results from similar works to contrast the results and thus support the contributions of the study.
3. The methodology should be presented in a clear way, e.g., a table with the sample by index. The variables can also be presented more clearly in a table.
4. The results could include the figure of the cluster, which would contribute to the clarity of the document.

The work has potential; improvements should be made to consolidate the document.
