Pancreatic Serous Cystadenocarcinoma

National Cancer Institute

Source

National Cancer Institute. *Pancreatic Serous Cystadenocarcinoma*. NCI Thesaurus. Code C5724.

A metastasizing, slow-growing malignant epithelial neoplasm that arises from the exocrine pancreas. It is characterized by the presence of cysts and is composed of glycogen-rich malignant epithelial cells which produce a watery fluid. Signs and symptoms include upper gastrointestinal bleeding, weight loss, jaundice, and abdominal pain.
