**Potential competing interests:** No potential competing interests to declare.

Good paper, well written and structured, clear figures, valuable data, and well presented in tables. The language is good but needs some improvements. Here are some improvements to enhance the paper:

1. Don't use abbreviations in the abstract; write the full terms.
2. Merge the objectives of the study with the last paragraph of the introduction.
3. Add some figures associated with materials and methods.
4. Add coordinates to fig.1 (location of the study area).
5. Add more references and citations from Springer and Elsevier publications.
6. The conclusions need some improvements; re-write the main conclusions.
7. What is the economic importance of this study? Clarify.
