

Review of: "Unpacking the Complexities of Cryptocurrency Prices Volatility in Times of Crisis: A Time Series Data with Long-term Memory or Long-range Dependence"

Shweta Agrawal

Potential competing interests: No potential competing interests to declare.

The article proposed use of Long-term Memory or Long-range Dependence to explore the complexities of cryptocurrency price volatility during times of crisis. The paper is acceptable after following minor corrections:

1. More recent references need to be added.
2. A comparative study with proper reference to find out the research gap is missing.
3. Check paper thoroughly for typo and grammatical errors.
