

Review of: "Neutronic Chain Reactions for Polonium-210 Production"

Sergei Malenkov

Potential competing interests: No potential competing interests to declare.

The author provides experimental evidence to support the occurrence of the chain reaction, including the observation of an exponential increase in the activity of the reaction over time and the identification of Po-210 using alpha spectroscopy.

The paper is well-written and well-organized, and the author clearly explains the background science and the experimental methodology. The results are presented in a clear and concise manner, and the conclusions are supported by the data.
