Potential competing interests: No potential competing interests to declare.

The clarity regarding the contribution and novelty of the work is insufficient. A more explicit delineation of how this research advances existing knowledge and introduces novel elements would enhance the manuscript's comprehensibility.

Furthermore, the language used in the manuscript lacks a professional tone. It is recommended to employ terminology and expressions more aligned with the academic context to bolster the overall professionalism of the document.

To fortify the robustness of the results, it is advisable to incorporate additional figures and conduct further experiments. This augmentation would not only provide a more comprehensive visual representation of the findings but also contribute to the overall strength and credibility of the research outcomes.
